                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other available information.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a sma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone Y111B2D.

1:
   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                   DB

CThis sequence corresponds to the genomic sequence encoding a Plasmodium CT rhis sequence corresponds to the genomic sequence encoding a Plasmodium CT rhis sequence corresponds to the genomic sequence encoding a CLSA-3) CC protein (W24790). The gene sequence was isolated by screening a CP - falciparum strain T9/96 library with the serum from a missionary CP - falciparum strain T9/96 library with the serum from a missionary CC - treated by prophylaxis (for strain T6/96 see FR9101286). Of 20 clones CC isolated, clone 729s was used to screen a library generated from Thai CC strain K1. One clone contained a 6.85 kb insert including the sequence CC presented here. The gene organisation comprises a first exon, a short CC corresponding to a glycosyl-phosphatidylings a 1.8 kb region encoding CC corresponding to a glycosyl-phosphatidylingsitol membrane anchoring CC corresponding to a glycosyl-phosphatidylingsitol membrane anchoring CC corresponding to a glycosyl-phosphatidylingsitol membrane anchoring CC amino acids derived from the LSA-3 polypeptides of at least 10 CC amino acids derived from the LSA-3 polypeptides of at least 10 CC amino acids derived from the LSA-3 polypeptides of at least 10 CC and as vaccines for immunotherapy of malaria.

Claim 4; Page 56-61; 96pp; English.

This sequence represents the var-7 gene of plasmodium. Var-7 belongs to the Duffy binding like (DBL) family of genes which have homology to the Duffy antigen binding protein (DABP) and stalic acid binding protein (SABP) conserved regions (see T72889 and T72888 respectively). The var family of genes modulate cytoadherence and antigenic variation of plasmodium infected erythrocytes. SABP and the Duffy antigen binding protein (DABP) are soluble proteins that appear in the culture supernatant after infected erythrocytes release merozoites. DABP and SABP mediate the binding of merozoites and schizonts to the erythrocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           surface. These proteins are necessary for erythrocyte invasion by the parasite. This sequence can be used in the compositions of the invention The compositions are for the treatment and prevention of malaria, and

The compositions are used for the treatment and prevention of malaria. They are also used in the preparation of vaccines for inducing a protective immune response in a mammal to Plasmodium merozoites (especially Plasmodium falciparum or Plasmodium vivax).

PS Claim 20; Fig IA-E; 69pp; French.

CC This sequence corresponds to the genomic sequence encoding a Plasmodium CC This sequence strain K1 pre-erythrocytic liver stage antigen-3 (LSA-3) CC protein (W24790). The gene sequence was isolated by screening a CC P. falciparum strain T9/96 library with the serum from a missionary CC treated by prophylaxis (for strain T6/96 see FR9101286). Of 20 clones collected, clone 729s was used to screen a library generated from Thai CC strain K1. One clone contained a 6.85 kb insert including the sequence presented here. The gene organisation comprises a first exon, a short CC library and a 5 kb second exon containing a 1.8 kb region encoding CC plocks of 4 amino acid repeats and a 3 hydrophobic region encoding corresponding to a glycosyl-phosphatidylinositol membrane anchoring sequence. The invention relates to new polypeptides of at least 10 CC amino acid derived from the LSA-3 polypeptide with the exception of cc peptides W24791-4. The LSA-3 peptides can be used to raise antibodies can das vaccines for immunotherapy of malaria.
                                                                                                                                                                                                                                                                                                                                               δÃ

The CDNA encodes a protein that includes 2 insert sequences not found in other CPSII proteins. The first separates the putative structural subdomain and the glutaminase subdomain of the glutamine-amidotransferase subunit of CPSII, while the second separates 2 ATP binding subdomains of the CPSII subunit, CPSa and CPSb.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           isolated from Plasmodium falc
the treatment of malaria.

The encoded (see P90417) is useful in a protective vaccine, esp. against . Produced antibodies are useful for passive immunisation, and ies, the protein and the DNA sequence are useful as diagnostic s. See also N90211-25 and P90403-19.

The polypeptides can inhibit, block or reverse the sequestration of erythrocytes in patients suffering from malaria. Nucleic acids derived from the PfEMP1 gene can be used as probes and primers to identify a Plasmodium falciparum parasite, the primers used to generate characteristic amplification patterns from different P. falciparum strains. Antibodies specifically

PT anaemia and other red blood cell disorders
PS Claim 7; Page 59-60; 84pp; English.
CC Human apolipoprotein B (apoB) scaffold attachment region (SAR)
CC element clones Rh32 (731530) and Rh10 (731531) respectively carry
CC element clones Rh32 (731530) and Rh10 (731531) respectively carry
CC camp with the boundaries of the distal 1212 bp 5' human apoB
CC co-map with the boundaries of the human apoB gene chromatin
CC domain. A novel recombinant DNA molecule adapted for transfection
CC of a host cell comprises an erythropoietin (EPO) cDNA (731529) or
CC genomic clone (731532) operably linked to an expression control
CC sequence and to the 5' and 3' SAR elements. The SAR elements
CC increase expression of the recombinant EPO in stable, long-term
CC mammalian cell cultures.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      40906
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 4; Fig 1; 55pp; English.

The inventors claim a novel DNA molecule which comprises a nucleotide sequence corresp. to all or a portion of the base sequence coding RESA (M60472) or FIRA (M60473). RESA and FIRA antigenicity suitable for providing protective immunity against plasmodium falciparum malarial infections.

Sequence 4590 BP; 1933 A; 437 C; 673 G; 1547 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       p-pSDB; p60569.

DNA coding for Plasmodium falciparum poly:peptide(s) having antigenicity of the poly:peptide(s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N60472 standard;

RESA and FIRA antigenicity suitable for providing protective immunity against plasmodium falciparum malarial infections.

Pr - and related vectors, transformed cells, proteins and antibodies, pr - and related vectors, transformed cells, proteins and antibodies, pr - useful for diagnosis, treatment and prevention of breast cancer PS Claim 1; Page 127; 173pp; English.

CC V68800 to V68998 represent nucleotide sequences which encode human companies of compass transfer periods. Detection or measurement of compass transfer periods and nucleotide sequences, or the corresponding RNA in a sample, is used for diagnosis and companies of breast cancer. Human breast tranour specific polypeptides and nucleotide sequences, and the vectors containing the DNAs, are also cuseful in vaccines for inhibiting development (for prevention or containing the polypeptides may also be used to craise monoclonal antibodies, used as immunoassay reagents.

Disclosure; p: English.

Sequence allows for production of antigenic malarial proteins, useful in diagnosis, prevention and treatment of the disease. The sequence may be used in an expression vector, and signal and regulatory sequences may be used to stimulate production of other products.

                                                                                                                                                                                                                        Sequence 2, Application US/07867106
Patent NO. 5389526
GENERAL INFORMATION:
APPLICANT: Slade, Martin B
APPLICANT: Chang, Andy C M
APPLICANT: Williams, Keith L
TITLE OF INVENTION: Improved Plasmid Vectors for Cellular
TITLE OF INVENTION: Sline Moulds of the Genus Dictyostelium
NUMBER OF SEQUENCES: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best
